

# certificates : **managed**

**keep control** of all  
cryptographic certificates.

we establish trust.

## Certificate Lifecycle Management

An elegant way to **fully secure all digital elements** in your organization with cryptography to create **sustainable digital resilience**.

We ensure that **implementation is state-of-the-art and compliant with standards** in order to achieve an **appropriate level of security** for current and future regulations.

A **complete overview** of all certificates in your company and **documented processes** will **get you reliably through every audit**. The simple creation of **audit reports** helps and enables **certificates** to be **found** safely.

Automation is the key to **low operating costs** and safe operation, and the answer to the **rapidly growing** numbers of **machine certificates** and extremely **short certificate lifecycles**.

- Effective **Zero Trust** implementation
- **Complete overview** of certificates based on properties, audit-reports & crypto-inventory
- Set **advanced policies** for manual processes
- Enforcing the **documentation of processes** by automated systems
- **Low operating costs** by automated systems
- **Shortest certificate lifecycles** by automated systems
- Manage **different types** or **issuers** of certificates

# keep control of all cryptographic certificates.
